<th>Key Concept 1.1 Big Geography and the Peopling of the Earth</th>
<th>Answer</th>
<th>“Factoids”</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.1 What is the evidence that explains the earliest history of humans and the planet? How is this evidence interpreted?</td>
<td>The term “Big Geography” draws attention to the global nature of world history. Throughout the Paleolithic period, humans migrated from Africa to Eurasia, Australia, and the Americas. Early humans were mobile and creative in adapting to different geographical settings from savannah to desert to Ice Age tundra. By analogy with modern hunter/forager societies, anthropologists infer that these bands were relatively egalitarian. Humans also developed varied and sophisticated technologies. Archeological evidence indicates that during the Paleolithic Era, hunting-foraging bands of humans gradually migrated from their origin in East Africa to Eurasia, Australia and the Americas, adapting their technology and cultures to new climate regions.</td>
<td>• hunter-gatherer (hunter-forager) • Paleolithic</td>
</tr>
</tbody>
</table>

| 1.1.I Where did humans first appear on Earth, and what were their society, technology, and culture? | Humans used fire in new ways: to aid hunting and foraging, to protect against predators and to adapt to cold environments. Humans developed a wider range of tools specially adapted to different environments from tropics to tundra. | • animism • “Out of Africa” • kinship group |
| 1.1.I.A-B Describe earliest humans’ technology & tools | Religion was most likely animistic. Economic structures focused on small kinship groups of hunting/foraging bands that could make what they needed to survive. However, not all groups were self-sufficient; they exchanged people, ideas and goods. | |
| 1.1.I.C How did the earliest humans’ society help them procure enough supplies to survive? | Economic structures focused on small kinship groups of hunting/foraging bands that could make what they needed to survive. However, not all groups were self-sufficient; they exchanged people, ideas and goods. | |

<thead>
<tr>
<th>1.2 What were the long-term demographic, social, political, and economic effects of the Neolithic Revolution?</th>
<th>In response to warming climates at the end of the last Ice Age from about 10,000 years ago, some groups adapted to the environment in new ways while others remained hunter/foragers. Settled agriculture appeared in several different parts of the world. The switch to agriculture created a more reliable, but not necessarily more diversified, food supply. Agriculturalists also had a massive impact on the environment, through intensive cultivation of selected plants to the exclusion of others, through the construction of irrigation systems and through the use of domesticated animals for food and for labor. Populations increased; family groups gave way to village and later urban life with all its complexity. Patriarchy and forced labor systems developed giving elite men concentrated power over most of the other people in their societies. (<a href="#">Domesticated plants &amp; animals map</a>)</th>
</tr>
</thead>
<tbody>
<tr>
<td>How did pastoral societies resemble or differ from early agricultural societies?</td>
<td>Pastoralism emerged in parts of Africa and Eurasia. Pastoral peoples domesticated animals and led their herds around grazing ranges. Like agriculturalists, pastoralists tended to be more socially stratified than were hunter-foragers. Because pastoralists were mobile, they rarely accumulated large amounts of material possessions, which would have been a hindrance when changing grazing areas. Pastoralists’ mobility allowed them to become an important conduit for technological change as they interacted with settled populations. Including--wait for it... The Mongols!</td>

</tr>
<tr>
<td>1.2.I.E</td>
<td>What were the environmental effects of the Neolithic Revolution?</td>
</tr>
</tbody>
</table>

Beginning about 10,000 years ago, the Neolithic Revolution led to the development of new and more complex economic and social systems. Possibly as a response to climatic change, permanent agricultural villages emerged first in the lands of the eastern Mediterranean. Agriculture emerged at different times in Mesopotamia, the Nile River valley and sub-Saharan Africa, the Indus River valley, the Yellow River or Huang He valley, Papua-New Guinea, Mesoamerica and the Andes.

Pastoralism developed at various sites in the grasslands of Afro-Eurasia.

Different crops or animals were domesticated in the various core regions, depending on available local flora and fauna.

Agricultural communities had to work cooperatively to clear land and to create the water control systems needed for crop production.

These agricultural practices drastically impacted environmental diversity. Pastoralists also affected the environment by grazing large numbers of animals on fragile grasslands, leading to erosion when over-grazed.

- River Valley Civs (Nile, Tigris-Euphrates, Indus, Huang He / Yellow)

Study Guide by Key Concepts

1.2.II  What were the effects of pastoralism & agriculture on humans?

1.2.II.A  What effects did pastoralism & agriculture have on the food supply?

1.2.II.B  What were the social effects of the increased food supply caused by increase of agriculture?

1.2.II.C  What technological innovations are associated with the growth of agriculture?

<table>
<thead>
<tr>
<th>Question</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.2.II. What were the effects of pastoralism &amp; agriculture on humans?</td>
<td>Agriculture and pastoralism began to transform human societies. Pastoralism and agriculture led to more <strong>reliable and abundant food supplies</strong> which increased population.</td>
</tr>
<tr>
<td>1.2.II.A What effects did pastoralism &amp; agriculture have on the food supply?</td>
<td>Surpluses of food and other goods led to <strong>specialization of labor</strong>, including new <strong>classes</strong> of <strong>artisans</strong> and <strong>warriors</strong>, and the development of <strong>elites</strong>.</td>
</tr>
<tr>
<td>1.2.II.B What were the social effects of the increased food supply caused by increase of agriculture?</td>
<td>Technological innovations led to improvements in agricultural production, trade, and transportation, including <strong>pottery</strong>, <strong>plows</strong>, woven <strong>textiles</strong>, <strong>metallurgy</strong>, <strong>wheels</strong> and wheeled vehicles.</td>

</tr>
</tbody>
</table>
### 1.3 What is a ‘civilization,’ and what are the defining characteristics of a civilization? How did civilizations develop and grow more complex before 600 BCE? What were the effects of this increasing complexity?

From about 5,000 years ago, urban societies developed, laying the foundations for the first civilizations. The term civilization is normally used to designate large societies with cities and powerful states. While there were many differences between civilizations, they also shared important features. They all produced agricultural surpluses that permitted significant specialization of labor. All civilizations contained cities and generated complex institutions, such as political bureaucracies, including armies and religious hierarchies. They also featured clearly stratified social hierarchies and organized long-distance trading relationships. Economic exchanges intensified within and between civilizations, as well as with nomadic pastoralists.

As populations grew, competition for surplus resources, especially food, led to greater social stratification, specialization of labor, increased trade, more complex systems of government and religion, and the development of record keeping. As civilizations expanded, they had to balance their need for more resources with environmental constraints such as the danger of undermining soil fertility. Finally, the accumulation of wealth in settled communities spurred warfare between communities and/or with pastoralists; this violence drove the development of new technologies of war and urban defense.

### 1.3.I Where did the earliest civilizations develop, and why did they develop in those locations?

Core and foundational civilizations developed in a variety of geographical and environmental settings where agriculture flourished. NOTE: Students should be able to identify the location of all of the following (Map)

- Mesopotamia in the Tigris and Euphrates River valleys
- Egypt in the Nile River valley
- Mohenjo-Daro and Harappa in the Indus River valley
- The Shang in the Yellow River or Huang He valley
- The Olmecs in Mesoamerica
- Chavin in Andean South America.

| 1.3.II  What is a “state”? Who ruled the early states, and which segments of society usually supported the ruler? | The first states emerged within core civilizations. States were powerful new systems of rule that mobilized surplus labor and resources over large areas. Early states were often led by a ruler whose source of power was believed to be divine or had divine support, and who was supported by the religious hierarchy and professional warriors. As states grew and competed for land and resources, the more favorably situated had greater access to resources—including the Hittites’ access to iron, produced more surplus food and experienced growing populations. Early regions of state expansion or empire building were Mesopotamia and Babylonia—Sumerians, Akkadians and Babylonians—and Egypt and Nubia along the Nile Valley. Pastoralists were often the developers and disseminators of new weapons and modes of transportation that transformed warfare in agrarian civilizations. • compound bows • chariots • iron weapons • horseback riding | Define (they’re NOT synonyms!)
• state—the government
• nation—group of people w/ common culture
• country—the thing ruled by the state?

1.3.II.B Why were some early states able to expand and conquering neighboring states? |

1.3.II.C Give four examples of early empires in the Nile & Tigris/Euphrates River Valleys. |

1.3.II.D What role did pastoral civilizations play vis a vis empires? |

- Hittites -iron
- Sumeria
- Akkadia
- Babylonia
- Egypt (Old, Middle New)
- Nubia
- bows
- chariots
- iron weapons

**Culture played a significant role in unifying states through law, language, literature, religion, myths and monumental art.**

- Early civilizations developed monumental architecture and urban planning:
  - ziggurat
  - temples
  - streets and roads
  - pyramids
  - defensive walls
  - sewage and water systems

- Elites, both political and religious, promoted arts and artisanship:
  - sculpture
  - painting
  - wall decorations
  - elaborate weaving

- Systems of record keeping arose independently in all early civilizations:
  - cuneiform
  - hieroglyphs
  - pictographs
  - alphabets
  - quipu

- Literature was also a reflection of culture:
  - the Epic of Gilgamesh
  - Rig Veda
  - Book of the Dead

- New religious beliefs developed in this period continued to have strong influences in later periods, including the Vedic religion, Hebrew monotheism and Zoroastrianism.

- Trade expanded throughout this period, with civilizations exchanging goods, cultural ideas and technology. **Trade expanded** from local to regional and transregional, including between Egypt and Nubia, Mesopotamia and the Indus valley.

- **Social and gender hierarchies intensified** as states expanded and cities multiplied.
